

**Functional,
Affordable and
Dependable**

Jobu Design products are made in Toronto, Ontario by a group of dedicated machinists, designers and fabricators.

Our goal is to produce high quality gear at affordable prices. By keeping nearly 100% of the design, CNC machining and fabrication in Canada we tightly control the entire production process.

Visiting the GTA? Give us a call and come in to try your gear on our products. We would be pleased to create a custom-fit setup for you.

Gimbals

Jobu Design has been in the gimbal head business for over 10 years. Our Canadian made products are part of a modular system that enables nature photographers to shoot their favorite subjects without breaking the bank.

Stable platforms give you stable shots and more

Our core products are the BWG gimbal heads. The Jobu Jr.3 is suitable for most small F4 telephotos and zooms; the BWG-LW2/HD2 units are for mid-size glass; and the BWG-Pro head is for seriously big equipment (+800mm).

The simplicity of the Arca-Swiss™ quick release system allows for quick changeovers of lenses, and easy tool-less attachment of flash brackets.

Build your Gimbal System:

1. Determine your lens and camera sizes, focal lengths and weights.
2. Pick a gimbal head for your shooting style, price-point and required performance level.
3. Get 1 Surefoot lensplate for each of your lenses. Check our chart!
4. Select flash brackets and other accessories.

2010 Core Products Suggested Retail Prices

BWG-J3K—Junior Kit

One of the lightest and most compact gimbal heads on the market. Needle roller bearings allow smoother tilting under heavy loads and better adjustment of friction. Kit includes the gimbal, horizontal arm and quick release.

\$349CAD
MSRP

BWG-LW2—Lightweight

The basic building block of our mid-size gimbals, the LW2 is supremely stiff and fluid. One piece cast and heat treated construction creates a lightweight and precise base.

\$399CAD
MSRP

BWG-HD2—Heavy Duty

Our most popular size, the HD2 kit performs extremely well with nearly all telephotos. Built upon the LW2 base, we add a CNC machined swing arm for increased control and balance adjustment.

\$499CAD
MSRP

BWG-Pro and ProB

If you are serious about shooting, you need a serious gimbal. A no-compromise design offers the best stiffness, best fluidity and highest degree of control available for your **MONSTER** lenses. Available in black & green.

\$699CAD
MSRP

2010 Accessories Suggested Retail Prices

SF-NX Series lensplates

In order to balance your camera and lens, you must have a compatible lensplate. These simple devices are custom fit to your lens to allow forward/aft balance.

\$39-
65CAD
MSRP

FB—Flash brackets

Quick release flash brackets mount quickly to your lens and help reduce red-eye in birds and animals and offer a more natural looking light source.

\$95-
149CAD
MSRP

SGP—Ground Pod

SGP gets your camera low to the ground. Dual-sided mounting allows you to push the SGP on skis, or firmly sit on 3 rubber tipped legs.

\$150CAD
MSRP

MCF—Carbon Fiber Monopod

Lightweight and portable monopod to kit together with small or medium sized Jobu gimbals and small telephoto lenses. 4 leg sections.

\$150CAD
MSRP

VRB—Panning base

A clickable-indexed base to mount your camera, primarily used for stitching images for panoramic photography.

\$150CAD
MSRP
