

## Jobu Design

### Horizontal Mount for Black Widow Gimbal Tripod Head

#### Usage Instructions.

Fig A.

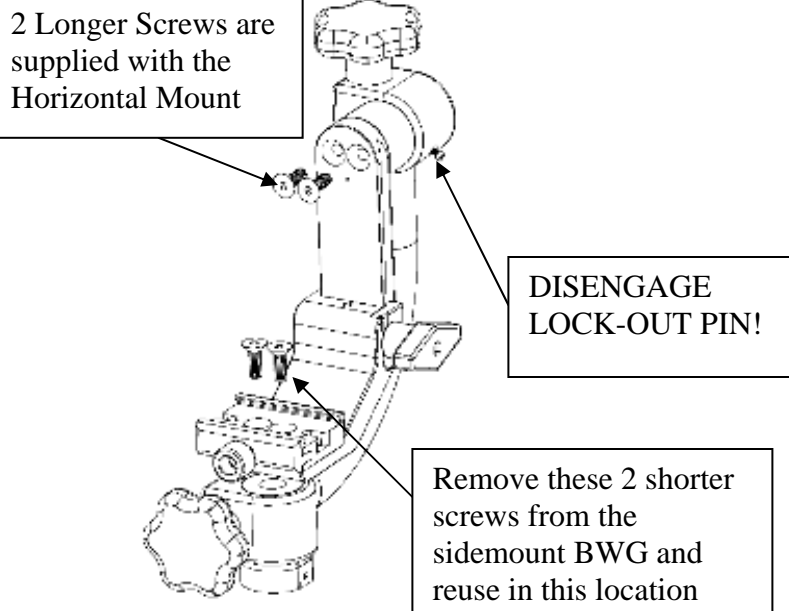

#### Usage:

The Horizontal Mount for the BWG is a simple, rugged device that converts the standard side-mount lens orientation, to a top-mount, for ease of installation with large, heavy lenses, such as:

600mm F4  
400mm F2.8  
500mm F4

Top-mounting allows easier handling when loading the lens and camera onto the BWG. One hand is free to balance the lens, while the other tightens the clamp.

Fig B.

#### Installation:

#### IMPORTANT!!!

Before Installing/Removing anything!

**DO NOT** use the Lock-Out pin to hold the shaft in place while tightening or loosening the screws. It **WILL** damage the shaft and/or the pin. You are stronger than you think when you turn that little Allen wrench!!!

#### RELEASE THE PIN FIRST!!!

1. Remove the 2 screws holding the Quick-Release, and use them to attach it to the bottom end of the Horizontal Mount, as shown in Fig B.
2. Use the 2 longer supplied screws to attach to the BWG. Over-tightening is not required.
